Product Information Sheet Regulation (EU) 2025/40 (PPWR)
For food contact materials (FCM)

Page 1 / 5

Introduction

Dear Reader,

Regulation (EU) 2025/40 of the European Parliament and of the Council of 19 December 2024 on packaging and packaging waste (PPWR), published in the Official Journal of the European Union (OJ L, 22.1.2025), establishes harmonised requirements for packaging placed on the Union market. This Regulation repeals Directive 94/62/EC, as amended and introduces a comprehensive framework covering sustainability, recyclability, chemical safety, technical documentation and conformity assessment for packaging.

The purpose of this document is to provide all necessary information to support downstream compliance obligations within the supply chain, in regard to Regulation (EU) 2025/40, with particular emphasis on the restriction of per- and polyfluoroalkyl substances (PFAS) for food contact articles, heavy metal limitations and recycled content considerations (PCR Materials).

If you have any questions relating to the regulatory compliance of this product that are not addressed in this document, please contact your Bericap Sales representative who will be happy to support you with your request.

Yours Sincerely,

BERICAP POLSKA Sp. z o.o.

This document was issued electronically and is therefore valid without signature

General Information:**Identity of the article - Product Code and Name:**

Product Information**Description of the Product**

Bericap manufactures and supplies Closures made from polymers, e.g. PE or PP for sealing purposes. Please see Product Specifications and Customer drawings for further details.

Packaging category:

The packaging category in accordance with Annex II of Regulation (EU) 2025/40 (PPWR) refers to the final packaging placed on the market and is determined based on its overall material composition. As a manufacturer of packaging materials and/or components (closures), we do not define the final packaging category. However, we provide all relevant material specifications and technical data required for our customers to classify the final packaging and assess its compliance with applicable regulatory requirements.

Product Mass: Please see Product Specifications

Regulatory substance requirements**Heavy Metals:**

We, the supplier BERICAP POLSKA Sp. z o.o., hereby declare that our products, as listed above, do not contain heavy metals in amounts exceeding the limits set forth by the European Union's Directive 94/62/EC of 20 December 1994, as amended and the United States' CONEG (Coalition of Northeastern Governors) regulations. These regulations restrict the presence of certain heavy metals in packaging, limiting the concentration of lead (Pb), cadmium (Cd), mercury (Hg), and hexavalent chromium (Cr VI) to 100 ppm (parts per million) or less in total.

Based on the current state of knowledge and the confirmations provided by our suppliers, the presence of these heavy metals is not expected and the limit values set forth in Directive 94/62/EC, as amended, and Regulation (EU) 2025/40 are not expected to be exceeded. This assessment is based solely on supplier information and available documentation.

Our commitment to maintaining the highest standards of safety and compliance with relevant applicable regulatory requirements is integral to our operations. We continuously monitor our supply chain to ensure that all materials used in the production of our products comply with applicable regulations.

Further we cannot give you any warranty those are not constitutionally contained (or are present at level of ubiquitous(**) traces) in the raw materials. Please note that, in any case our company does not carry out any specific analysis in order to detect the presence of above-mentioned substances.

(**)Ubiquitous in regard to a chemical substance means that this substance is omnipresent (occurs literally everywhere) and its occurrence in this "ubiquitous" traces cannot be avoided by any technical, physical or chemical measure.

Disclaimer:

The information provided is based on the declarations and data supplied by our raw material suppliers. While we make every effort to ensure the accuracy and reliability of this information, we cannot guarantee its completeness or correctness.

All statements are based on supplier information and internal evaluations. No independent analytical verification has been conducted by Bericap unless explicitly stated.

Bericap does not assume responsibility for any discrepancies or inaccuracies in the information provided by third parties, nor for the final compliance of the finished packaging placed on the market.

PFAS:

We, the supplier BERICAP POLSKA Sp. z o.o., confirm that we (Bericap) do not intentionally use or add PFAS (per- and polyfluoroalkyl substances) in the manufacture of our products. Additionally, our suppliers have confirmed that they do not intentionally add PFAS as ingredients in the production of the raw materials used in these grades.

Based on the current state of knowledge and the confirmations provided by our suppliers, the presence of PFAS is not expected and the limit values set forth in Regulation (EU) 2025/40 are not expected to be exceeded. This assessment is based solely on supplier information and available documentation.

Our commitment to maintaining the highest standards of safety and compliance with relevant applicable regulatory requirements is integral to our operations. We continuously monitor our supply chain to ensure that all materials used in the production of our products comply with applicable regulations.

Furthermore we cannot provide any warranty that PFAS are not constitutionally contained (or are present at level of ubiquitous(**) traces) in the raw materials. Please note that, in any case our company does not carry out any specific analysis in order to detect the presence of above-mentioned substances.

(**)Ubiquitous in regard to a chemical substance means that this substance is omnipresent (occurs literally everywhere) and its occurrence in this "ubiquitous" traces cannot be avoided by any technical, physical or chemical measure.

Disclaimer:

The information provided is based on the declarations and data supplied by our raw material suppliers. While we make every effort to ensure the accuracy and reliability of this information, we cannot guarantee its completeness or correctness.

All statements are based on supplier information and internal evaluations. No independent analytical verification has been conducted by Bericap unless explicitly stated.

Bericap does not assume responsibility for any discrepancies or inaccuracies in the information provided by third parties, nor for the final compliance of the finished packaging placed on the market.

Definition PFAS

PFAS (per- and polyfluoroalkyl substances) are a broad group of synthetic chemical compounds characterized by a high content of fluorine atoms. They are defined as substances containing at least one fully fluorinated methyl (CF₃-) or methylene (-CF₂-) carbon atom.

Due to their unique properties, such as resistance to water, grease, and oil, PFAS are widely used in various industrial applications, including food packaging, coatings, and processing aids.

This group of substances includes well-known compounds such as PFOA, PFOS, and polymers like PTFE (polytetrafluoroethylene), commonly known as Teflon. PTFE is widely used for its non-stick properties, chemical stability, and barrier functionality in packaging applications.

PFAS are often referred to as "forever chemicals" due to their high persistence in the environment and resistance to degradation. As a result, they can accumulate over time and are subject to increasing regulatory scrutiny.

Due to analytical limitations and the broad definition of PFAS, it is not scientifically possible to demonstrate the absolute absence of all PFAS substances!

Compliance with regulatory limits is assessed at the level of the final packaging system as placed on the market,

not at the level of individual components!

Reusable Packaging (Art. 11):

The products covered by this document are not designed, developed, or intended to be reusable packaging within the meaning of Article 11 of Regulation (EU) 2025/40.

They are single-use packaging components and are not intended to undergo multiple cycles or rotations within a reuse system.

Therefore, the requirements set out in Article 11 are not applicable.

Obligations related to Reusable Packaging (Art. 26):

As the products described in this document are not classified as reusable packaging, the obligations outlined in Article 26 of Regulation (EU) 2025/40 do not apply.

No reuse systems are implemented or required for these products.

Description of Assessment Methodology:

The compliance assessments referenced in this document are based on a combination of supplier declarations, internal data management systems, and regulatory evaluations.

Bericap approach to assess compliance with applicable regulatory requirements is based on the following. This includes, but is not limited to:

- Collection and evaluation of raw material data and supplier declarations
- Review of regulatory requirements at EU and, where applicable, international level
- Internal checks of material compositions and intended use
- Continuous monitoring of regulatory developments

No systematic analytical testing (e.g. chemical analysis for PFAS or heavy metals) is conducted, regulatory authorities, or risk assessment outcomes.

The evaluations reflect the current state of knowledge and regulatory framework at the time of issuance of this document.

Regulatory Status Disclaimer:

Regulation (EU) 2025/40 (PPWR) is currently subject to transitional provisions and further implementing acts.

This document is intended to provide an overview of relevant requirements and current compliance status based on available information. It does not constitute a formal declaration of full compliance with all aspects of the Regulation.

Future updates may be required as additional legal requirements become applicable or clarified.

Allocation of Responsibility:

In accordance with Regulation (EU) 2025/40, Bericap acts solely as a supplier of packaging components.

We provide all relevant information and documentation to enable our customers to assess compliance of the final packaging system. The responsibility for conformity assessment, preparation of technical documentation, and

issuance of the Declaration of Conformity rests exclusively with the producer placing the packaging on the market in its final form.

Further detailed regulatory and scientific explanations regarding Regulation (EU) 2025/40 are available upon request.

Note: This Product Information Sheet provides information for the purpose of regulatory awareness and guidance. It does not constitute a legally binding declaration of conformity. Final compliance of the packaging system rests with the producer placing it on the market.
